

ORTHO LAZER FOR ACUTE AND CHRONIC PAIN AND INFLAMMATION

MLS Laser Therapy at OrthoLazer is a proven, opioid free, effective pain relief treatment for athletes, and everyone who suffers from acute or chronic musculoskeletal pain. During this short, painless therapy, you will be comfortably positioned while a robotic laser treats the affected area using concentrated light energy. Patients receive 6 treatments for acute conditions like sprains and strains, or 12 treatments for chronic conditions like osteoarthritis. The MLS Laser at OrthoLazer is FDA cleared for decreasing pain, inflammation and swelling. It's time to take back your life, and OrthoLazer can help.

WHAT OUR PATIENTS SAY

“ I'm an endurance runner who's had his fair share of injuries. I've pulled and torn my hamstrings multiple times. Needless to say, recovery time is months for me now. I was referred to OrthoLazer by Orthopedics Associates. It was definitely the right move. I had multiple treatments that truly helped my recovery. The treatments on my right hamstring were so effective, I plan on doing the same for my left.

“ I've suffered many years from bursitis in my right hip. Injections every 3 months. The problem with the injection, it would wear off in 2 months. For that month I would be in horrible pain. OrthoLazer is a life saver. After 10 treatments, there isn't any pain and I can put my right sock on without pain and lift my leg into the car without any help.

Laser therapy is now included in the American Academy of Orthopedic Surgeons (AAOS) Guidelines for the treatment of osteoarthritis knee pain

DECREASES PAIN

- Washes out painful substances
- Blocks out pain transmission signals to the brain
- Decreases nerve sensitivity
- Reduces muscle spasms
- Increases endorphin synthesis

INCREASES HEALING

- Accelerates wound healing, increasing blood flow to the area
- Increases supply of nutrients, oxygen and growth factors
- Induces the recovery of muscle fibers and damaged nerve endings
- Reduces the formation of scar tissue

DECREASES INFLAMMATION

- Activates lymphatic drainage to reduce swelling
- Increases energy available to the cells so they take on nutrients faster and eliminate waste products
